EDUCATION

Cornell University — Ph.D. in Applied Economics and Management — Expected Jun. 2028
Stanford University — IvyPlus Exchange Scholar — Sep. 2026–Present
University of Wisconsin–Madison — Visiting Ph.D. Student — Jan.–May 2024

Peking University — Master in Finance — Jun. 2022
B.A. in Economics — Jul. 2019

RESEARCH EXPERIENCE

Negotiated Trade Protection: Minimum Import Prices and Quantity Commitments *(Job Market Paper)*

- Investigated how alternative trade agreements reshape firm incentives, consumer demand, and stakeholder surplus in a differentiated-products market.
- Developed and solved a three-stage proposal-acceptance-pricing game by backward induction, then implemented a random-coefficients BLP demand system in Julia and linked it to multiproduct Bertrand pricing using European registrations, prices, and vehicle characteristics.
- Ran counterfactual simulations showing that quantity commitments yield slightly higher exporter profits, while minimum import prices deliver higher social welfare and EV sales. Exempting the same vehicle pool from the duty yields the largest gains, raising social welfare by €157.1m (0.7%) and EV sales by 13,643 units (1% of total sales).

Sequential Visits: Measuring Consumer Visit Patterns

with Sandeep Chitla, Jingwei Zhang, and Ruihao Zhu

- Tested whether weekly recurrence in mobile-location data identifies habitual return behavior or merely captures mechanical timing patterns.
- Built checkpointed Python and SQL workflows in DuckDB to process 1.03 billion raw visit records spanning 15 months into reproducible monthly tables and compare repeat visits to the same and different locations.
- Found sharp weekly timing patterns in both same- and different-location repeat visits, showing that weekly recurrence alone is insufficient to identify habitual return behavior. Used this diagnostic to refine subsequent sample construction with collaborators.

Selective Tariffs and Electric Vehicle Product Portfolios

- Examined how firms adjust along the intensive and extensive margins, and whether selectively targeting battery-electric vehicles generates spillovers to an untargeted close substitute.
- Built a 20-country monthly vehicle panel (2023–2025) linking model-level registrations, assembly origins, ownership, and posted prices, and estimated triple-difference and event-study specifications in Stata.
- Documented adjustment primarily along the extensive margin: EU destinations recorded 6.2 fewer China-built battery-electric models per destination-month relative to comparison markets, while the registered product mix shifted upward by 12.1% at fixed model reference prices. Found no statistically detectable change in incumbent prices or registrations and no robust substitution toward untargeted plug-in hybrids.

ADDITIONAL EXPERIENCE

China International Capital Corporation — *Investment Banking Intern*, Beijing — Jan.–Jun. 2019

- Interviewed 20+ suppliers, customers, executives, and technical staff for a semiconductor IPO, synthesizing findings into time-sensitive client responses and deal-team materials.

Cornell University — *Teaching Assistant & Research Mentor* — Fall 2023–Spring 2026

- Led Ph.D. microeconomics and econometrics instruction across 3 teaching appointments, earning a 4.93/5.00 evaluation. Mentored students on 20+ course projects, 10+ of which they later developed into second-year or job-market papers.

CICER (Cornell) & eSET G-SIL (Stanford) — *Program Organizer & Curriculum Designer* — Summers 2025–2026

- Organized Cornell and Stanford summer programs serving 150+ students and designed economics, business, and sustainability curricula, including a footwear-industry case competition.

TECHNICAL SKILLS & LANGUAGES

Technical: Julia (Advanced) | Python (Intermediate) | SQL/DuckDB (Intermediate) | Stata (Advanced) | LaTeX/Overleaf (Advanced)
Languages: Chinese (Native) | English (Fluent)
