EDUCATION

Cornell University — Ph.D. in Applied Economics and Management — Expected Jun. 2028
Stanford University — IvyPlus Exchange Scholar — Sep. 2026–Present
University of Wisconsin–Madison — Visiting Ph.D. Student — Jan.–May 2024

Peking University — Master in Finance — Jun. 2022
B.A. in Economics — Jul. 2019

RESEARCH EXPERIENCE

Research Fields: Industrial Organization, Applied Microeconomics, Energy & Environmental Economics

Sequential Visits: Measuring Consumer Visit Patterns
with Sandeep Chitla, Jingwei Zhang, and Ruihao Zhu

- Evaluated whether weekly recurrence in mobile-location records is a reliable measure of habitual consumer behavior.
- Built checkpointed Python and SQL workflows in DuckDB to process 1.03 billion raw visit records over 15 months into reproducible monthly tables; compared repeat visits to the same and different locations.
- Found weekly patterns in both groups, showing that recurrence alone does not establish habit formation. Used this diagnostic with collaborators to refine sample construction and research design.

Selective Tariffs and Electric Vehicle Product Portfolios

- Built a monthly vehicle panel covering 20 countries (2023–2025), linking registrations, assembly origins, corporate ownership, and posted prices to study how firms adjust product portfolios after a tariff change.
- Estimated triple-difference (DDD) and event-study models in Stata to compare EU and non-EU markets, separating changes in product availability, product mix, and incumbent-model prices.
- Found 6.2 fewer China-built battery-electric models per EU destination-month relative to comparison markets and a shift toward models with higher reference prices, with no statistically detectable change in incumbent posted prices.

Negotiated Trade Protection: Minimum Import Prices and Quantity Commitments *(Job Market Paper)*

- Estimated consumer demand with a random-coefficients BLP model in Julia using European vehicle registrations, prices, and characteristics.
- Ran structural counterfactuals combining estimated demand with multiproduct Bertrand pricing to compare prices and sales under tariffs, minimum import prices, quantity commitments, and duty exemption.
- Simulations favored quantity commitments for exporter profits and minimum import prices for social welfare; duty exemption for the same vehicle pool added 13,643 EV sales.

ADDITIONAL EXPERIENCE

Cornell University — *Teaching Assistant & Research Mentor* — Fall 2023–Spring 2026

- Explained Ph.D. microeconomics and econometrics across 3 teaching appointments, earning a 4.93/5.00 evaluation in Microeconomic Theory; mentored 20+ course projects.

China International Capital Corporation — *Investment Banking Intern*, Beijing — Jan.–Jun. 2019

- Interviewed 20+ suppliers, customers, executives, and technical staff for a semiconductor IPO; synthesized interview evidence and industry research into client responses and deal-team materials.

CICER (Cornell) & eSET G-SIL (Stanford) — *Program Organizer & Curriculum Designer* — Summers 2025–2026

- Coordinated faculty, external speakers, and academic, NGO, and industry partners to deliver summer programs for 150+ students; designed curricula in economics, business, and sustainability.

TECHNICAL SKILLS & LANGUAGES

Technical: Python | SQL/DuckDB | Stata | Julia | LaTeX/Overleaf
Methods: Causal Inference | Difference-in-Differences (DiD/DDD) | Event Studies
Demand Estimation | Discrete Choice | Pricing | Structural Modeling
Languages: Chinese (Native) | English (Fluent)
